Number 2

Gamma Theta Upsilon

Gamma Theta Upsilon (GTU) was established in 1928 as a professional geography honor society. The organization was founded by faculty members and students at Illinois State University in Normal, Illinois to recognize and promote scholarship in geography. Since its inception, over 300 chapters have been added, mostly in the United States. Currently, the society has over 70,000 members worldwide.

The purpose of GTU remains embodied in the symbolism found in the society's key insignia. The body of the key is seven-sided and represents the seven continents of the Earth. The Greek letters ΓΘΥ represent the three great environmental domains of our planet: Ge (Earth), Thalassia (sea), and Hypaithrois (atmosphere). The waves in the center of the key signify the major oceans of the world and the star is symbolic of Polaris, which guided travelers over the lands and oceans of the northern hemisphere for centuries.

With the rise of globalization, the need to understand the complex array of forces that shape our world is more critical than ever before. Gamma Theta Upsilon is committed to fostering geographic knowledge and education among the public. Currently, five scholarships are awarded annually to GTU members: four to undergraduates, and one to a continuing graduate student in geography. In cooperation with the Association of American Geographers, GTU also funds the Visiting Geographical Scientist Program, which sponsors prominent geographers to work with university and college Geography departments.

THE GEOGRAPHICAL BULLETIN

The Geographical Bulletin is a peer-reviewed journal published semi-annually (May and November) by Gamma Theta Upsilon, the international geography honor society. In keeping with its goals of promoting geography awareness, GTU offers *The Geographical Bulletin* as an open-access online journal that does not charge authors for either submission or subsequent publication. While *The Geographical Bulletin* began publication as an outlet for student research in 1970, it welcomes submissions from established geographers, researchers, and other scholars. Many students who have gone on to graduate school in geography and related fields have seen their first professional publication appear in *The Bulletin*. To encourage student publication, Gamma Theta Upsilon awards an annual "Best Student Paper Award" with a two-hundred-dollar (USD) prize. Published articles are available free of charge in PDF form on the GTU website, as well as being indexed through EBSCO's databases and selectively abstracted in Current Geographical Publications of the American Geographical Society, Geo-Abstracts, and Sociological Abstracts. For questions about *The Geographical Bulletin*, including potential article submission, please visit the current journal website (<https://digitalcommons.kennesaw.edu/thegeographicalbulletin/>), the GTU website, or contact:

RESEARCH ARTICLES

Evaluating the use of Unpiloted Aerial Systems to detect and monitor beech bark disease in New England forests

By Isabelle Lopez, Benjamin T. Fraser, and Russell G. Congalton 61

High-Mountain Hazards in the Indian Himalaya: An assessment of the causes and effects of the Chamoli Flood in 2021

By Christina M. Salzmann, Sarah J. Halvorson, and Anna E. Klene 71

Open-Source Based Change Pattern Analysis of Urban Green Spaces Using Landscape Metrics

By Mohammad Anwar Alattar 83

Prediction of Traffic Congestion Using a Time-Series Model and Spatiotemporal Data: A Case Study of the Atlanta Downtown Connector

By Yunsik Kim 93

A Remote Sensing Investigation of the 2022 Invasion of Eastern Ukraine on Agricultural Landcover

By Michael S. Agbozo, Luke J. Marzen, and Chandana Mitra 103

Predicting Cloud Fraction with Instantaneous Direct and Diffuse Shortwave Solar Irradiance

By Jamison Lerma, Emily K. Blackaby, Maosi Chen, Sasha Madronich, and Wei Gao 121

Recovery of microtopography following prairie restoration: Implications for biodiversity monitoring

By Karli Cich and Scott Powell 131

Modeling the Impact of Ocean Temperature Increases on the Distribution of Seagrasses around the Korean Peninsula Using a Machine Learning Technique

By Jina Jang, Seohyeon Kim and Jeong Seong 143

GIS-based Spatial and Temporal Analyses of Motor Vehicle Crashes in the Atlanta Metropolitan Region 2017 – 2021

By Heyward Stober and Jeong C. Seong 151

Toward Energy-Efficient Deep Neural Networks for Forest Fire Detection in an Image

Yali Wang, Chuulabat Purev, Hunter Barndt, Henry Toal, Jason Kim, Luke Underwood, Luis Avalo, and Arghya Kusum Das 161
