

Introduction

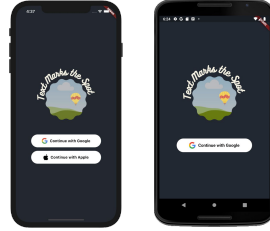

Text Marks the spot is a cross-platform mobile messaging application that enables users to send & receive individualized location-based 'Textmarks'.

Technologies

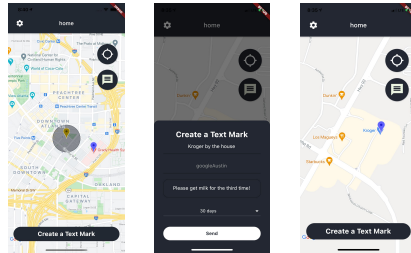

Text Marks the Spot was developed using Flutter & the Dart programming language for its capabilities of building a mobile application for both iOS & Android. Other Google created & Flutter compatible tools (Firebase, Cloud Firestore, & Google Maps) were utilized to handle authentication, database handling, & mapping/location services.

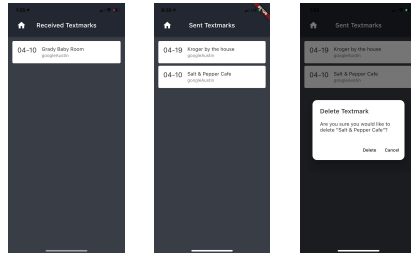

Apple & Google Sign In Capabilities

Map-View: Create & View Textmarks

List-View: View & Delete Sent/Received Textmarks
