Introduction

❖ This project allows a user to search and sort through the Georgia school system and see the schools visually on a map.

❖ This project’s goal is to allow a user to sort through the school system as efficiently and effectively as possible.

Methods

❖ We used JavaScript, jQuery, Google Maps API, Github Pages hosting, HTML, and CSS.

❖ Additionally, we employed a “letter and color” legend system for the markers correspondent to the school’s overall rating and grade level.

An interactive map of Georgia’s schools
